0. Introduction

1. This report was drafted by Broken Chalk to contribute to the fourth Universal Periodic Review (UPR) of Ecuador. Broken Chalk is an organization that fights against violations of Human Rights and improving the quality of education around the globe. This report will discuss the main challenges Ecuador faces in regards to Education, what are some issues that could be improved through Education, and finally Broken Chalk will offer some recommendations in the field of Education for Ecuador based on the raised issues.
2. In the last 2017 review Ecuador received 182 recommendations, and it supported 162 recommendations relating to legal and general framework of implementation, universal and cross-cutting issues, civil and political rights, economic, social, and cultural rights, women's rights, and rights of other vulnerable groups and persons¹.
3. Ecuador has stated that efforts to guarantee the widest coverage and highest possible quality of education at all levels has been intensified². In fact, between the years 2007 and 2017, net enrollment in basic education increased from 91.4% to 96.1%, and net enrollment rate in upper-secondary increased from 51.2% to 70.8%³. Regarding the gender gap, education for women has risen much faster than for males, therefore the gender gap in schooling has almost been closed⁴. Despite this, there are still improvements to be made, especially in quality of education and accessibility.

I. Main issues in Education

Quality of Education

4. Despite the improvements made in education, the quality of education remains poor. Information on tests scores show that students are on average lacking in basic mathematical and language skills⁵. It is important to note that achievement tests have been discontinued, therefore the information for these test scores are limited. Amongst the rural and indigenous population, the completed years of education are four and three years lower than the national average⁶.

⁶ Ibid.

5. The drop-out rates for higher education remains high, despite the significant improvements in the gross enrollment rates for HE⁷. Throughout 2012-2017, only half of all the students enrolled in HE completed their degree. This could be because some students show low levels of academic readiness and because HE programs are usually long (5+ years), leading to higher levels of drop-out rates⁸. However, Broken Chalk wants to congratulate Ecuador for implementing reforms that have led to the significant improvement of graduation rates in 2012-2017 compared to the rates from 2007-2012⁹.
6. The enrollment rates in Ecuador have been higher, but despite the high enrollment rates, the education system still faces more challenges. Schools are often overcrowded and teachers overwhelmed¹⁰.
7. In order to lower illiteracy rates, Ecuador has implemented policies regarding the extension of specific literacy programs and campaigns¹¹. Despite these policies, there is still a high level of illiteracy rates among the indigenous and African descent population compared to the level of illiteracy rates among the mestizo population¹². The Survey of Adult Skills, which comes from the OECD Programme for the International Assessment of Adult Competencies, showed that less than 1 in 10 adults are proficient at Level 3 or higher in literacy in Ecuador¹³. This survey also showed that Ecuador is among the countries/economies with one of the largest proportions of adults (71.2%) who scored at Level 1 or lower in literacy¹⁴. This means that adults in this level have basic reading skills.
8. One issue that Broken Chalk is concerned with is that education may suffer due to inequalities in Ecuador. The expansion of educational provision is not equal, because rural areas, indigenous populations and the black community are often left behind¹⁵. However, Broken Chalk does congratulate Ecuador on the policies that have been implemented which has improved the quality of education significantly since the 1990's¹⁶.
9. Retention rates and quality of education in Ecuador could be effected by the high rate of teacher absenteeism and frequent teacher strikes¹⁷. Teacher strikes mainly affects both

primary and secondary schools. In 2003, an article stated that in poorer areas an average on nine schools days per month is gone due to strikes and teacher absenteeism¹⁸. At the end of 2003, all the public schools were closed for two months due to a teacher strike over a salary increase¹⁹. Although there are no current evaluations to verify the impact of these strikes, available information does suggest that it is an important issue²⁰.

- 10.** There has been a noticeable increase in increasing schools' physical infrastructure, number of laboratories, new educational equipment, acquisition of technological tools, installation of libraries, and construction of new spaces for physical practice, sports and recreation through the project "Schools of Millennium" (SOM)²¹. However, some argue that these public policies fail to be effective when teachers express that they do not feel qualified to work with students with physical or intellectual disabilities, and express this inability to do so despite all the inclusive education training they receive²². Teachers should be heard, and their trainings should be structured based on what they feel they are lacking. The better trainings teachers receive, the more they may feel prepared to provide high-quality education to students.
- 11.** Schools of the millennium (SOM) is one of the most important projects done by the government to help improve public education. Each classroom has a digital whiteboard, kitchens, recreational areas, eating areas, science labs, virtual libraries, and computer labs with broad band internet²³. While this is a great achievement by the government in bettering public education, teachers feel that these resources are not utilized effectively due to the lack of teacher training and even lack of enough teachers in some cases²⁴. In order for these resources to be fully effective, Ecuador should give more effective trainings to the teachers, in order for them to prove high-quality education to their students.

Education for people with disabilities

- 12.** The Government Advisor and Chair of the National Council for Disability Equality of Ecuador said that in Ecuador there were 38, 446 children and adolescents with disabilities, of school age from three to eighteen years, who were included in the national education

system²⁵. Experts were concerned about persons with intellectual disabilities attending special schools, emphasizing that segregation does not work²⁶. This was mentioned because after special schools, there are no special jobs, special communities or a special society for persons with intellectual disabilities. They emphasized that the attention and focus should be put on inclusive education instead²⁷.

- 13.** People with disabilities can often feel excluded when attending school. Teachers may not always be equipped or trained to teach students with hearing, visual, or mental disabilities, and buildings may not have ramps or spaces for students who have physical disabilities. In Ecuador, these types of deficiencies prevented 56% of children with disabilities from attending schools, according to data from the Ministry of education²⁸. It is estimated that only 11.9% of people with disabilities attend high school, and for those who do attend, the lack of specialized services reduce their likelihood of finishing their secondary education²⁹.
- 14.** With regards to the teachers, many believe that they are not ready to have students with disabilities in the classroom, due to a high number of barriers and insufficient academic training to cope with different disabilities³⁰. They also believe that it is not just the teachers, but also the students and the schools that are not fully prepared to have students and mates with disabilities³¹. The best way to help students, schools, and teachers to be better prepared to help students with disabilities is to focus on inclusive education, which enhances social and physical inclusion, and cultivates empathic values.

Poverty and discrimination in Education

- 15.** It is well established that poverty has a large effect on a student's ability to learn. Poverty affects factors such as students' health and well-being, literacy and language development, access to physical and material resources, and level of mobility³². Currently, there are regions in Ecuador, particularly rural areas, where 50% of children and adolescents live in poor households, without access to portable water, sanitation or health care facilities³³. 35% of Ecuadorians living in rural areas live in overcrowded housing³⁴.

- 16.** Broken Chalk congratulates Ecuador on their efforts to fight against illiteracy and child labor, since 97% of children between the ages 5 and 17 years old go to school³⁵. However, school drop out rates are still a problem, with the two most vulnerable groups being pregnant teenagers and indigenous populations, which have the lowest completion rates in their secondary studies³⁶. In regards to bullying and violence at school, almost a third of children and teenagers suffer violent treatment or disciplinary punishments. This rises alarmingly among mixed-race and indigenous children, of whom 42% suffer this form of violence³⁷.
- 17.** Afro-Ecuadorian children are often subject to discrimination in access to education³⁸. In some cases, parents are illegally required to pay a sum of money to enroll their child at school, a school that in principle should be free of charge³⁹. Many children coming from poor families, predominately Afro-Ecuadorian and Indigenous, leave school to provide financial support to their families⁴⁰.
- 18.** Public schools in urban zones often present conditions that hinder learning, such as large class size and shortage of teaching staff⁴¹. There is only one teacher for each level, which is composed of 50 to 60 students. Sometimes there are not enough number of classrooms for each grade level so children from two different grades are taught in the same classroom⁴².

Sexual Violence in Education

- 19.** Between 2015 and 2017, there were 4,584 reports of sexual abuse in Ecuadorian schools, with teachers registered as the main aggressors⁴³. Three out of 10 adolescents in Latin America have suffered from sexual harassment in schools, and 1.1 million girls within the region have suffered some form of sexual violence⁴⁴.
- 20.** Although Ecuador has taken important steps to handle the issue and expedite justice since 2017, the policies and protocols are not adequately carried out by many schools⁴⁵. Human Rights Watch found that teachers, school staff, janitors, and school bus drivers have committed sexual violence against children of all ages, including children with disabilities,

in public or private schools⁴⁶.

- 21.** Ecuador declared a zero-tolerance policy, requiring teachers, school counselors, and other staff to report allegations of sexual violence within 24 hours. Human Rights Watch found severe gaps in the carrying out of this policy and ensuring adherence to its binding protocol⁴⁷.

II. Recommendations for the use of Education to improve current challenges

Sexual health and education

- 22.** Sex Education is an important method of preventing adolescent pregnancies, STIs, and being victims of gender-based violence. In Ecuador, 20% of all women aged 15 to 19 become pregnant before the age of 20, and the leading cause of death among young women in developing countries are complications associated with pregnancies⁴⁸. An informed and good Sex Education program can help prevent unsafe abortions, complications and deaths in young women from unplanned pregnancies, reducing the risk of STIs, and promote the correct use of birth control contraception such as condoms, or birth control pills.
- 23.** Sex Education is also a good tool to reduce machismo and prevent possible cases of violence and sexual abuse against children and adolescents⁴⁹. Teachers add that unfortunately, these subjects are still considered taboo in many households, despite the fact that there are minors that have been sexually active since 13 years of age⁵⁰.
- 24.** Broken Chalk recommends that Sex Education programs include information about safe contraceptive use, possible complications of unplanned pregnancies, and the importance of consent. It is also important to create an environment within the classroom where students can feel comfortable to ask questions, and attempt to reduce the taboo and stigma surrounding sex and sexuality.

Inclusive education for people with disabilities

- 25.** Broken Chalk recommends that Ecuador continue to focus on implementing inclusive education in schools, both public and private. Inclusive education is very important because it can help teachers feel more prepared to have students with intellectual

⁴⁹ ArchyWorldys. (2021). *Teachers find it difficult to talk about sex education in the classroom*

⁵⁰ Ibid.

disabilities in the classroom, and it promotes feelings of empathy from their fellow classmates.

- 26.** Broken Chalk also recommends that the infrastructure of schools be better equipped for students with physical disabilities as well. Ramps and larger spaces should be installed for students who use wheelchairs for example.
- 27.** Better training programs for teachers must be provided, as teachers previously expressed their concern over their ability to teach students with various disabilities. Trainings should include information on the different forms of disabilities, both physical and intellectual, and how to structure the curriculum so that these students are included. Trainings should be given by professionals who have experience with teaching students with disabilities, as they could share best practices.
- 28.** Extra help in schools if possible would also be helpful, not just for the teachers but for students with disabilities as well. Extra help such as a center for tutoring, or extra help outside the classroom.

Discrimination in Education

- 29.** Broken Chalk recommends that school curriculums should include information about the history of indigenous population and Afro-Ecuadorian communities. Their history should be accurately taught in the classroom, and their culture should be discussed with the class. By doing so, it is possible that children can learn about their own history, and ideally reduce the perception that indigenous and Afro-Ecuadorian communities are below them.
- 30.** Violence against Afro-Ecuadorian children is an urgent matter that needs to be addressed adequately. There needs to be a zero-tolerance policy for these acts of violence, and fellow classmates and teachers alike should be encouraged to report any cases of violence or discrimination.
- 31.** Schools in rural areas should be staffed with more teachers, and teachers need more support in order to provide high quality education. Teachers need better trainings on how to use new technologies that are provided by SOM for example, and in rural areas, they need less students per classroom. One teacher cannot be in charge of multiple classes that have 50 or 60 students per class, otherwise students will fall behind and the teacher will burn out. If possible, there needs to be more classrooms, so that students can be spread out more easily
